AI design

AI has no taste. It has *your rules.*

5 rules that remove the AI look.

Emanuel Werner

Rule 1 of 5

1

One typeface. One *accent.*

Every extra font or color makes a piece look generated.

Example

One serif and one gold. Nothing else.

Rule 2 of 5

No *gradients.* No stock icons.

2

They're the first thing people recognize as AI.

Instead

Type and texture. A paper grain does more than a glow.

Rule 3 of 5

3

One mark, *by hand.*

A single underline or circle, on the word that matters.

Rule

Never two marks on the same piece.

Rule 4 of 5

Real logos, *or none.*

If you name a product, show its real icon. Otherwise, no logos at all.

Example

Google Ads gets the Google Ads icon,
not a generic G.

Rule 5 of 5

One idea per *piece.*

If the sentence needs two ideas, it's two pieces.

Test

Can someone get it in one second, on a phone?

The habit

Write every correction as a *rule.*

Save it in a file the AI reads before it designs.
